DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on **October 23, 2003**, has been entered.
2. This Office Action is also in response to applicant's amendment filed on October 8, 2003, which has been entered as paper number 14.
3. By this amendment, the applicant has amended claims 74, and 77-78, has canceled claims 75-76 and had newly added claims 81-97.
4. Claims 74 and 77-97 remain pending in the application.
5. The rejections to claims 74-80 under 35 USC 112, first paragraph, set forth in the previous Office Action dated May 23, 2003, are withdrawn in response to applicant's amendment.

Double Patenting

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2872

7. **Claims 74, 84, 85, 86, 87, 95 and 96 are rejected under the judicially created doctrine of obviousness-type double patenting** as being unpatentable over claims 1, 3, 6, 7, 44, 46, 49, 51, 62 and 63 of U.S. Patent No. 6,667,830. Although the conflicting claims are not identical, they are not patentably distinct from each other because **both** of the cited patent and the instant application claim a *microscope having a light source for generating a light beam of first wavelength to excited the molecules in the sample from ground state to a first excited state and a second light source for generating a light beam of second wavelength to excite the sample molecules from first excited state to a second excite state, which is the basic operation principle for the double-resonance absorption microscope. The microscope further comprises an overlap component for partially overlapping irradiating areas of the light beams so that an emission area is partially inhibited during de-excitation of the sample molecule. A phase modulation element is provided in the light path of the light with the second wavelength to introduce a π phase difference around the optical axis of the light beam.* The feature concerning adding the dye with ground and excitation states to the sample is standard practice in the art for observing sample under microscope and it should be implicitly included in the instant application in order for the double-resonance absorption, (i.e. the excitation and de-excitation between ground state, first and second excited states) to occur. The detector for detecting the signal is also implicitly included for observing the sample under microscope.
